Insights & Observations

- ***B Airways leads revenue generation (~$128K), followed closely by S & E Airlines***, *indicating competitive but slightly concentrated airline performance.*
- ***Mumbai and London are top revenue-generating cities***, *contributing the highest ticket sales among all locations.*
- ***Premium Economy (27.6%) and First Class (25.2%) dominate bookings***, *showing strong preference for higher-value travel segments.*
- ***Majority of flights fall within 5–15 hours***, *indicating dominance of medium to long-haul routes.*
- ***Weak correlation between flight duration and ticket price***, *suggesting pricing depends on multiple factors beyond duration (airline, class, demand).*

Insights & Observations

- ***Passengers aged 21–40 contribute the highest revenue (~$201K)**, making them the most valuable customer segment.*
- ***Credit Card, Net Banking, and Cash contribute nearly equal revenue (~$0.12M each)**, indicating balanced payment preferences.*
- ***Ticket price variability (~1497) is high, confirming a dynamic pricing model** across routes and segments.*
- ***Mumbai shows lower duration and lower variability** → most efficient city, while cities like **Singapore & Dubai show higher duration and variability**.*
- ***Air I and Q Airways have highest average flight durations**, indicating focus on long-haul operations.*
